Obesity Roadmap Overview

This illustration shows how transforming obesity care requires simultaneous, interconnected changes across three solution areas that strengthen and support one another.

The visual demonstrates that no single solution area can succeed in isolation—patient engagement and diagnosis improvements must work alongside shared capability building (updated coding, quality measures, and aligned incentives), which in turn enables integrated care delivery. The infographic shows how these solution areas create a reinforcing cycle: better patient engagement leads to improved system capabilities, which enables more effective integrated care, which builds confidence and encourages further patient engagement.

This systems view helps stakeholders understand that sustainable obesity care transformation requires coordinated action across the entire healthcare ecosystem, not piecemeal fixes to individual problems.
